In the article, “Relationship Between Reactive Pulmonary Hypertension and Mortality in Patients With Acute Decompensated Heart Failure” by Aronson et al, which appeared in the September 2011 issue of the journal (Circ Heart Fail. 2011;4:644–650), there were several errors in the second sentence of the Methods and Results section of the Abstract. The sentence should read as follows:

Patients were classified into 3 groups, using the final (posttreatment) hemodynamic measurements: (1) no PH (mean pulmonary artery pressure ≤25 mm Hg; (2) passive PH (mean pulmonary artery pressure >25, pulmonary capillary wedge pressure >15 mm Hg, and pulmonary vascular resistance ≤3 Wood units); and (3) reactive PH (mean pulmonary artery pressure >25, pulmonary capillary wedge pressure >15 mm Hg, and pulmonary vascular resistance >3 Wood units).

The online version of the article has been corrected.
