In the article by Pandey et al, “Efficacy and Safety of Exercise Training in Chronic Pulmonary Hypertension: Systematic Review and Meta-Analysis,” which first published online July 16, 2015, (DOI: 10.1161/CIRCHEARTFAILURE.114.001129), a correction is needed.

Following initial publication on July 16, the article “Exercise training improves peak oxygen consumption and haemodynamics in patients with severe pulmonary arterial hypertension and inoperable chronic thrombo-embolic pulmonary hypertension: a prospective, randomized, controlled trial” by Ehlken et al was published in the European Heart Journal (Eur Heart J. 2015 Jul 31. pii: ehv337. [Epub ahead of print]. DOI: http://dx.doi.org/10.1093/eurheartj/ehv337). While the findings in this RCT are along the lines of what Pandey et al reported in their systematic review, it was not in the version that published on July 16. Pandey et al have now performed an updated analysis, which includes the article by Ehlken et al.

These corrections have been made to the final version article, which is available at http://circheartfailure.ahajournals.org/content/8/6/1032.
